

## Newsletter 1, September 2009

### COMUNIS – Towards Sustainable Commercial Location Development

In many Alpine regions, adjacent municipalities strongly compete for commercial development. On the one hand, they individually pursue promising approaches to economic promotion and development in order to enhance their competitiveness and counteract the out-migration of the young and qualified. On the other hand, promising development strategies are often inadequate, resulting in the out-migration of companies.

An inter-municipally developed and agreed strategy, which takes into account the specific conditions of Alpine locations for a sustainable **commercial location development (CLD)**, is often missing in Alpine valleys.

Certainly, this is not an Alps-specific issue. However,

the consequences are more serious due to the special framework conditions. Valley location, scarcity of land and competing land use interests intensify the situation.

It is thus the **aim of COMUNIS to develop a well-defined integrative and cooperative strategy for commercial location development**. It is intended to point out the advantages of inter-municipal cooperation and prevent municipalities from 'going solo'. Particular focus will be on the diversification and efficiency of economic activities, environmental concerns as well as aspects of social and cultural life.

COMUNIS runs from July 2009 to June 2012.

### Approach

The approach of COMUNIS is based on the idea of **structurally decomposing the multifaceted matter of commercial location development (CLD)**. To this end, a number of settings in the Alpine area will be examined. Project partners will look into the existing legal framework, strategies and systems to manage the location of companies. The pros and cons of existing systems will be considered. Measures derived thereof will later be tested in selected pilot areas (Fig. 1). *The method is specified below.*

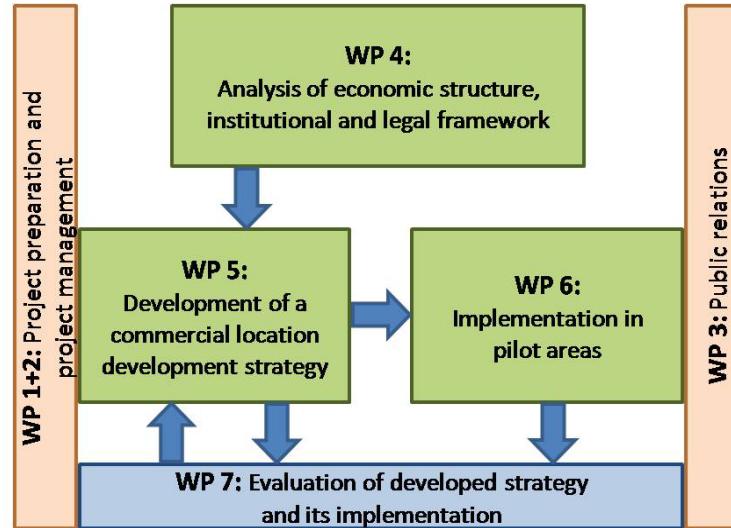

Fig. 1: The project is comprised of seven inter-related work packages (WP).

### Work Package Objectives

**WP 1+2:** During WP 1, the preparatory work for launching the project was completed in a common effort. Managing the transnational partnership and financial aspects is on the agenda of WP 2.

**WP 3:** Effective external and internal communication are essential for a successful and sustainable implementation of the project. A project-specific communication strategy has

been developed to raise awareness about the project, foster transparency, and spread the idea of commercial location development. Project information and results are henceforth available on the project website [www.comunis.eu](http://www.comunis.eu) as well as in other format such as project flyers, publications, regular press releases, etc.

**WP 4:** It is the aim of this WP to analyze the existing systems and framework conditions for commercial location development (CLD) in the pilot regions. This will allow for a transnational comparison best practice examples. On the basis of a comprehensive analysis of the economic structure and business location, it will be possible to derive strengths and weaknesses, as well as opportunities and threats of the business location. The findings will provide the basis for the work of all subsequent WPs.

**WP 5:** In this WP, the project partners develop a concerted strategy for commercial location development, consisting of organizational and structural components. These elements will include: methods for the location study, analysis of value chains, instruments for marketing and image strategies, inter-territorial spatial management and the inter-municipal cooperation. It will be possible to assemble and modify the modules according to the needs and conditions of a region.

**WP 6:** In this phase, the strategy for CLD will be tested in the pilot areas (Fig. 3). Involving the regional stakeholders and decision-makers at this stage is decisive for the project progress. At the same time, the basics for a knowledge-management platform are developed. Like this, the

transnational exchange of experiences will be promoted and the cooperation fostered after the project ends.

**WP 7:** Finally, the achievements and results of WPs 5 and 6 will systematically be analyzed. The concerted strategy for CLD will be modified according to the evaluation, recommendations and experiences made. At the same time, framework conditions for the sustainable knowledge management will be finalized.

## A Transnational Effort – The Project Partnership

Drawing on a wide range of theoretical knowledge and practical experience is essential for the success and acceptance of the project. Respective of this aim, private and public partners have come together to represent the local,

regional and national levels. They range from institutions of higher/post-graduate education and regional development agencies to economic development organizations and state institutions.

University of Applied Sciences Western Switzerland, Institut Economie et Tourisme, CH

## European Territorial Cooperation

COMUNIS was launched within the **Alpine Space Programme** of the **European Territorial Cooperation (ETC)**. ETC is one of the European Union's regional policy objectives. It aims at strengthening the competitiveness and attractiveness of Europe's regions. Here, EU-member states, Switzerland and Liechten-

stein cooperate to balance differences within and between European regions and to foster economic and social cohesion. The Alpine Space Programme particularly enhances this cooperation in the Alpine area. Although the projects deal with Alps-specific issues in the first place, their methodology, instruments

and results can also serve as approach to problem-solving in other European regions.

*The Alpine Space Programme is financed both by the European Union (through the European Regional Development Fund) and by the Partner States (EU-member states and non-member states) taking part in the activities.*

### Project Events

**Workshop, Zürich (CH): October 12, 2009**

**Communication Training, Munich (DE): October 19-20, 2009**

**Workshop, Lyon (F): December 3-4, 2009**
